

Full Stack PHP Tech Test

Please complete the below tech test prior to your interview, we will be discussing your solution during your interview. Please spend no more than 30 minutes on your solution.

Assessment

Please write a single class in PHP representing the Date of Birth (DOB) of a sample person, please ensure you extend the PHP DateTime class - <https://www.php.net/manual/en/class.datetime.php>

The class should allow a user to get the current age in plain text English according to the following criteria:

- DOB is less than 17 years old: 'Young'
- DOB is between 18 - 60 years old: 'Adult'
- DOB is over 60 years old: 'Senior'

This should be achieved using a function, for example **\$personDOB->getPlainTextAge()**.

Your class should also be able to calculate how many specific weekdays the person has lived so far, passed through as a parameter to a specific function.

For example: **\$personDOB->countWeekDays('Monday')** should return how many Mondays they have lived.

Once completed, please pass the class to your recruitment representative who will forward it onto us.

Thank you and good luck!
